Report Making - p4

- You have to use previous class dataset and power bi file.

Perform the below mentioned operations in Power BI:

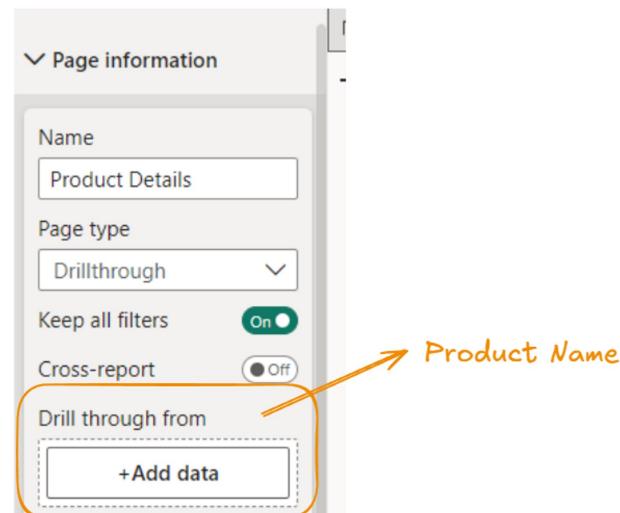

- Add a custom visual so that it shows all product names and their revenue one by one in a rotating manner.
- Import a visual of your choice from store.
- Create a bookmark page with some filters to view that page later for use.
- Use the Q&A feature to build some visuals automatically.
- Use the text box to create a heading for the page.
- Use sync slicer to connect filter more than one page at the same time.
- Use key influencer feature to generate an automated report based on the fields we drop to analyze and explain.
- Use the decomposition tree feature to show break down of data based on a calculation.

Drill Through -:

1. Task is to identify where that drilling needs to be done.

Generic Dashboard. [Product Details]

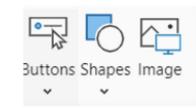

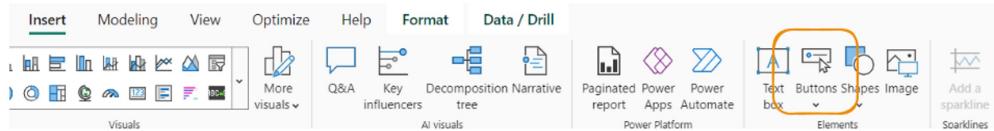

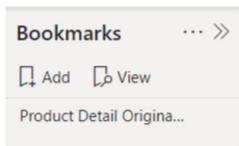

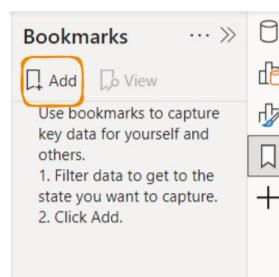

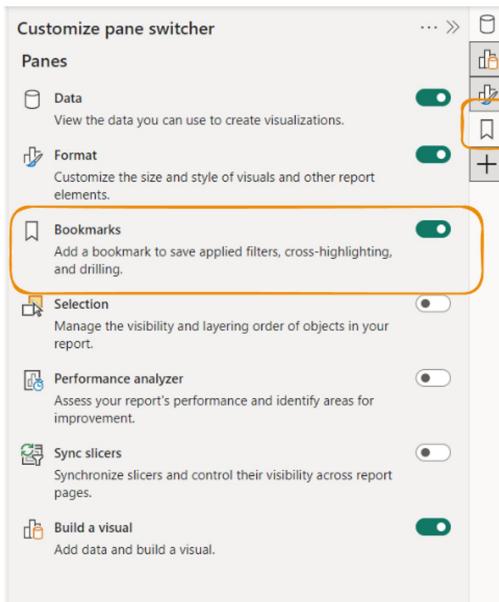

Bikash Barik to You (direct message) 20:00

slicer also consumes space in dashboard for a particular category..where drill through works in a sync from main dashboard
