

# Report Making - p3

23 September 2024 21:16

## Report Making - p3

- Using KPI, show revenue vs. target, order quantity vs. target, and return quantity vs. target.

Prev Month Return Qty = CALCULATE([Total Return Qty], DATEADD('d-Calendar'[Date], -1, MONTH))

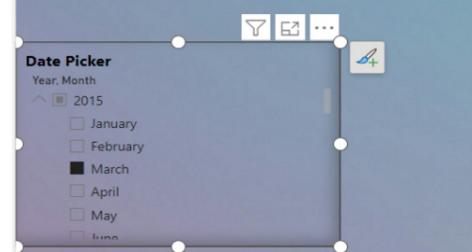

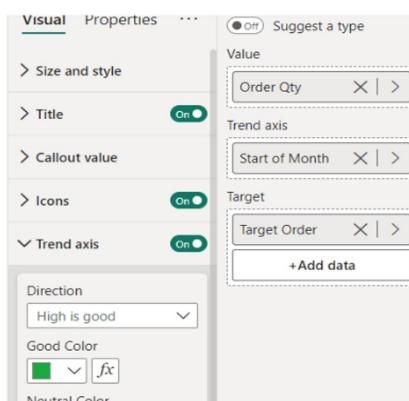

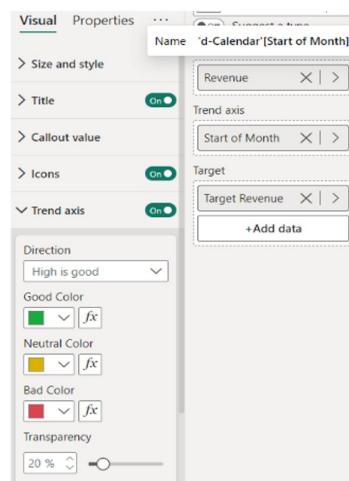

- As we are assuming that our sales, revenue are being increasing Month on Month.

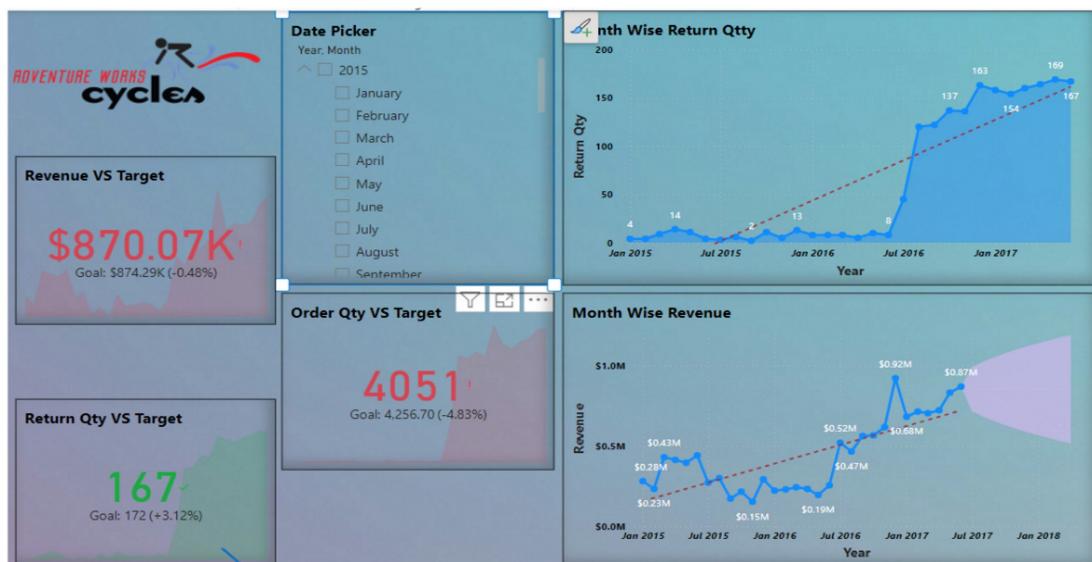

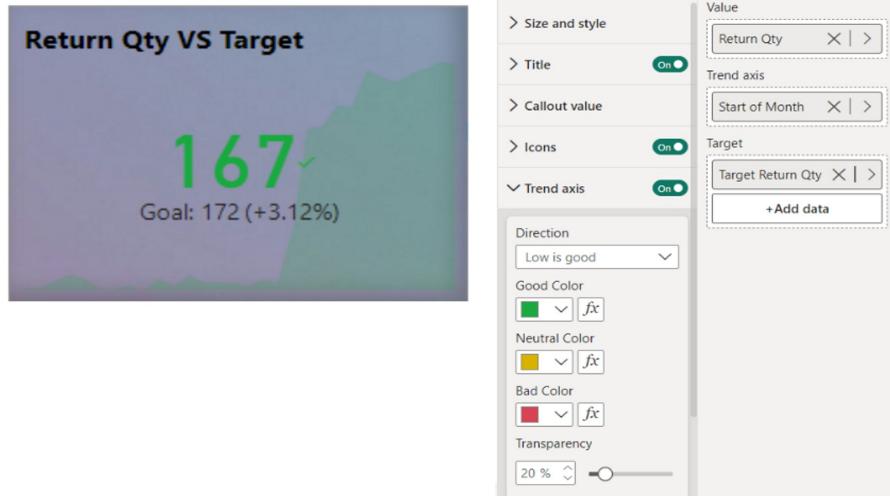

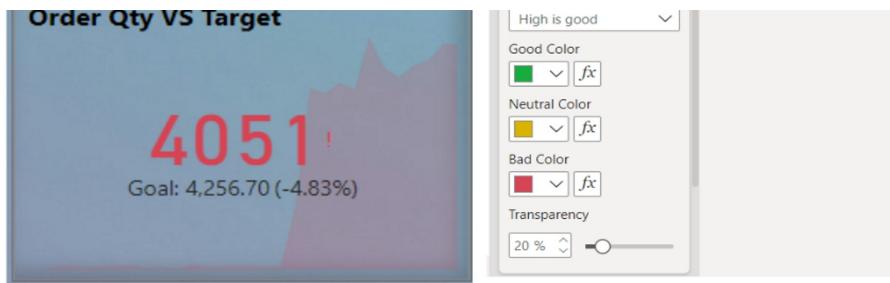

Total Order Quantity ~~ is directly proportional to return quantity.

2% is allowed in Return.

Target Return Qty = [Prev Month Return Qty] \* 1.05

- All target that we are defining here, needs to be ask as per the company demand.

Low is Good. [Direction]

\* You have to use previous class dataset and power bi.

Perform the below mentioned operations in Power BI:

- Add a custom visual so that it shows all product names and their revenue one by one in a rotating manner.
- Import a visual of your choice from store.
- Create a bookmark page with some filters to view that page later for use.
- Use the Q&A feature to build some visuals automatically.
- Use the text box to create a heading for the page.
- Use sync slicer to connect filter more than one page at the same time.
- Use key influencer feature to generate an automated report based on the fields we drop to analyze and explain.
- Use the decomposition tree feature to show break down of data based on a calculation.

Revenue VS Target  
\$870.07K  
Goal: \$874.29K (-0.48%)

Order Qty VS Target  
4051  
Goal: 4,256.70 (-4.83%)

Return Qty VS Target  
167  
Goal: 172 (+3.12%)
